

Sustainability Commitment

At Harbor Steel & Supply Corporation, we recognize the critical role we play in fostering a more sustainable future. As a leading steel service center, we are dedicated to minimizing our environmental impact while delivering high-quality steel products to our customers. Our commitment to sustainability is rooted in responsible material sourcing, efficient operations, and continuous efforts to reduce waste.

Recycled Content

We take pride in utilizing steel with significant recycled content. Steel is one of the most recyclable materials on the planet, and by prioritizing the use of recycled steel, we contribute to reducing the demand for virgin raw materials and lowering our overall carbon footprint. On average, Harbor Steel sources structural steel within the US and North America, containing 93% recycled content ([AISC.org](https://www.aisc.org)), ensuring that we support the circular economy and the sustainable use of resources.

Minimizing Scrap

In our operations, we are focused on efficiency and minimizing waste. Through advanced processing techniques and careful inventory management, we strive to reduce the generation of scrap material. When scrap is generated, we ensure it is responsibly recycled back into the steel production process, keeping waste out of landfills and reintroducing valuable materials into the supply chain.

Energy Efficiency & Environmental Responsibility

Beyond materials, we are continuously working to improve our energy efficiency and reduce our overall emissions. Our facilities are equipped with energy-efficient machinery and LED lighting. We are actively exploring renewable energy options to power our operations as well. We adhere to strict environmental regulations and industry standards to ensure that our processes are environmentally responsible.

Collaboration & Innovation

We believe that collaboration and innovation are key to achieving a sustainable future. We work closely with our suppliers, customers, and industry partners to identify opportunities for improvement and to foster best-practices in sustainability across the entire steel supply chain.

Commitment to the Future

At Harbor Steel, sustainability is more than a goal, it's a responsibility. We are committed to reducing our environmental footprint, driving innovation in sustainable practices, and playing an active role in the transition to a low-carbon economy. Together with our partners and customers, we are building a future where steel production and processing align with the principles of environmental stewardship and sustainability.
